High-performance speakers designed to deliver legendary JBL sound quality.

The JBL Stage3 speakers embody JBL's legendary sound, delivering powerful audio in the car. The woofer cone is manufactured using a laser-etched tool, features the patented Plus One™ design for increased surface area, and is reinforced with 10% glass fiber to play deeper, more resonant bass. The speaker's true 4-ohm load design maximizes power output from your head unit or amplifier, compensating for system resistance to ensure optimal performance. Additionally, the speakers incorporate post-consumer recycled plastic components, PVC-free wiring, and packaging printed with soy-based inks, thereby minimizing environmental impact. Finally, precise fitment is critical to the success of this speaker family—ensuring seamless integration and consistent acoustic performance across vehicle platforms.

Features and Benefits

Plus One™ Woofer Cone Architecture

HARMAN's patented (US patent #7,548,631) Plus One™ woofers provide more overall cone surface area than other woofers in their class. The result is higher sensitivity, increased low-frequency output, and greater musical character.

PEI Balanced Dome Tweeter for Coaxial Models

This material delivers unparalleled high-frequency clarity, free from harshness - even at high output levels.

Laser-etched Woofer Cone Design

Infused with 10% glass fiber, the woofer cone delivers powerful, resonant bass that enhances the overall listening experience. The laser-etched mold creates a forged carbon fiber effect that shifts visually under different lighting conditions, giving the speaker a sleek and upscale appearance.

Environment-conscious Materials

Stage3 Gen2 speakers incorporate post-consumer recycled plastic materials & PVC-free wiring with packaging utilizing soy-based inks, reflecting the unwavering commitment to environmentally conscious innovation.

True 4-ohm Technology

True 4-ohm load maximizes every watt from your head unit or amplifier by compensating for additional resistance generated in the system.

Engineered to Fit

Close attention to fitment is paramount to the success of this speaker family.

Edge-driven Silk Dome Tweeter for Component Models

It features a full, edge-driven silk dome tweeter that delivers a broader and smoother high-frequency response than more commonly used w-domes, while remaining never harsh regardless of output level.
